STANDARD INDEX OF SHORT STORIES

1915 - 1933

PREFACE

The Standard Index of Short Stories 1900-1914, published in 1918, was the result of the cumulation on cards of thousands of titles of short stories by many authors that had appeared in various magazines, but in many instances were not reprinted in book form. Although the short story is the most characteristic and popular form of American literature, it is a curious fact that the overwhelming majority of short stories, including many of the best that are published each year, are not reprinted afterwards. It is also true that many of the short stories that have appeared in magazines are not well written and have no worth, but the insistent demand for a particular story proved to me that whether a story was well written or not, it should be included in the index. This applies also to the author of one short story as well as to the author of many short stories.

The present cumulation is an index, by author and title, under one alphabet, of the short stories published in two hundred and seventy magazines from January, 1915, to December, 1933, inclusive, and contains more than 75,000 entries, comprising the work of more than 9,000 authors.

The annual volumes of the Best Short Stories, published yearly by Mr. Edward J. O'Brien, include an index of short stories listed under the author's name, and all of the stories listed in the index of the Best Short Stories volumes have been included in the Standard Index of Short Stories by author and title.

Francis J. Hannigan.

Boston Public Library,
November, 1935.

[The body of the document contains several paragraphs of extremely faint, illegible text, likely bleed-through from the reverse side of the page. The text is organized into approximately four distinct sections, separated by small gaps or changes in indentation. The first section appears to be an introductory paragraph, followed by two longer paragraphs of descriptive or narrative text. The final section at the bottom of the page may represent a concluding statement or a signature block, though the details are completely obscured by the low contrast and blurriness of the scan.]
